### General Manager Report

For May 2024 Board Meeting

<u>April 24-26, 2024 – SWRCB Board Workshop on Proposed VAs Related to Sacramento/Delta Update:</u> I invite all to keep up with the proposals for Voluntary Agreements to update and implement the Bay-Delta Plan. The State Water Resources Control Board (SWRCB) held a three-day public workshop in April. The below link will get you to the YouTube video stream platform: <a href="https://www.youtube.com/watch?v=zHQz3\_sl-0E">https://www.youtube.com/watch?v=zHQz3\_sl-0E</a>

Reclamation Operations & Maintenance Costs from 2022 Transfers: Upon further investigation, the O&M deficit costs associated with our 2022 water transfers were in fact billed and collected, however, was left unpaid. The amount collected and now owed to Reclamation is \$305,371. The amount due is interest bearing and we will process payment as soon as possible.

<u>Grant Awarded: ACID River Diversion Alternative Analysis Feasibility Study:</u> I received word on May 1, the grant for analyzing our change of diversion was awarded. A meeting is currently being scheduled with our team toward the end of May.

**20-year Transfer Program EIS/R:** ACID was included in the previous environmental impact statement for transfer in 2019 which will be ending in 2024. Reclamation is taking the lead on a new 20-year transfer program intended to cover San Luis & Delta Mendota Water Authority, Contra Costa Water District, East Bay Municipal Utility District and the Tehama Colusa Canal Authority. Our previous (2019) transfer quantity was 5,000 acre feet, I added two thousand acre feet to the new 20-year program for up to 7,000 acre feet of transfer water. This transfer type is for only groundwater substitution transfers.

### **Meetings/Presentations:**

- Several SRSC meetings
- Jacobs tour of canal lining
- KSN-Holly Dawley on Olney Creek Project
- Several concerned Landowner interactions and field visits
- Danny Kerns on Capital Improvement Projects & Final Walk Through

### Look Ahead:

- Teamster Negotiations
- Shasta County Board of Supervisors Presentation 5/21
- Committee Input and Development

### RE: South Hill Improvement Area - Shotcrete Cracking

Mr. Spoon,

While performing a review of the construction progress on the South Hill Street Improvement Area April 19<sup>th</sup>, 2024, cracks were observed in a portion of the recently placed right bank shotcrete lining. The observed cracks extend from the top of the lining to near the channel bottom for approximately 20 to 30-feet along the length of the canal. The location of the cracking is approximately between Station 15+00 and 15+50 (referenced by the Project's Construction Documents) and directly downstream of the existing large oak tree along the right bank of the canal (See Image 1 below).

Figure 1: Approximate Location of Observed Shotcrete Cracking Highlighted in Red (South Hill Street Improvement Area)

The cracks were observed only 3 days after the shotcrete was placed which is not expected nor typical for newly placed shotcrete on a properly prepared subgrade. While the cracking will not likely result in immediate failure of the newly constructed lining, if left unrepaired it will certainly accelerate the degradation of the shotcrete which could necessitate replacement before the design life expectancy of this type of canal lining (40 year minimum). See Image 1 below for example of the observed shotcrete cracking.

G:\Anderson Cottonwood ID-4191\419123002-Emergency Eng Srvcs\800 Construction\804 Const Memo\2024-0422 South Hill Shotcrete Cracking.docx

Prior to construction activities, the right canal side slope (looking downstream) was more gradual (shallow sloping) than was typical for this portion of the canal (see Image 2 below). The Project Design Plans and Specifications (Construction Documents) stipulate that the canal should be shaped and graded to have side slopes ranging from 1:1 to 2:1. The varying side slopes allowed by the Construction Documents was intended to minimize or remove the need for any placement of fill within the channel. However, if fill placement was needed for one reason or another, the Construction Documents require placement of fill to be performed in a specified way which includes placement in horizontal lifts not more than 8-inches thick and compacted to a minimum of 90% modified density at or near optimum soil moisture content. Placement of fill on side slopes is also required to be "benched" into the existing slope to minimize the possibility of a failure plane between the existing ground and placed fill. These specified criteria are important to ensure that any canal embankment or lining subgrade material is stable.

In the location of the South Hill Street Improvement Area where cracking was observed, Steve Manning Construction Inc. (Contractor, SMCI) placed uncompacted fill on the right bank side slope (see Image 3 below). The Contractor was aware that placement of uncompacted fill was not permitted by the Contract Documents because previously and upstream a few hundred feet, SMCI placed uncompacted fill on the canal inside slope to dispose of earth material that was excavated during the canal trimming and grading activities. However, Provost & Pritchard engineering staff notified SMCI that this was not allowed per the Contract Documents and requested that the placed material be removed and hauled off site. With this knowledge and a few days later, SMCI operators again placed uncompacted fill in the area where cracking has now occurred.

The nature and severity of the cracking may be indicative of the liner subgrade earth material swelling, shrinking and/or shifting. Because water is now present in the canal, no further investigation can be performed to determine with certainty the cause, severity, and precise limits of the compromised liner.

This letter serves as notice to Steve Manning Construction Inc. that the placement of uncompacted fill material and portion of the lining that was constructed over uncompacted fill is not accepted by Anderson-Cottonwood Irrigation District. Section 3-1.12 of the Contract Documents provides for removal of rejected and unauthorized work if the District does not consent to accept such material or workmanship. Section 5-1.25 of the Contract Documents requires that the Contractor shall, for a period of one year after the date of acceptance of Work and without cost to the District, correct all defective Work.

As there was not sufficient time to fully assess the cracking shotcrete and underlying subgrade before the District filled the canal, a condition assessment will be performed by the District and its Engineer after the water year and when the canal is drained. Following the condition assessment, the Engineer will make recommendations for necessary correction of the defective work which may include the removal of uncompacted fill and shotcrete and the replacement and testing of compacted fill and shotcrete.

Respectfully,

Daniel Kerns, PE Senior Engineer

PROVOST & PRITCHARD CONSULTING GROUP
